Premium grinding solutions since 1919 www.tyrolit.com

Diamond tools and machines **Product catalogue**

The Tyrolit Group

Tyrolit is one of the world's leading manufacturers of grinding and dressing tools as well as a system provider for the construction industry.

Since 1919, our innovative tools have made an important contribution to the technological development in many industries. Tyrolit offers tailored grinding solutions for various applications, as well as a comprehensive assortment of standard tools for customers all over the world.

Tyrolit headquarters in Schwaz (Austria)

Headquartered in Schwaz (Austria), the familyowned business combines the strengths of being a part of the dynamic Swarovski Group with a century's worth of individual corporate and technological experience.

Facts & Figures

30+ production sites

500+ worldwide patents

Business units

METAL INDUSTRIES

Automotive industry

Our leading grinding solutions are used for the production of automotive parts with highest precision.

Steel & Foundry

With many years of experience in the machining of high alloyed steel we are the market-leader in the steel industry.

Precision industries

The extensive field of precision industries includes tools and system solutions for various highly specialised applications.

Industrial trade

Our comprehensive assortment for cutting, grinding and surface treatment for professional end users is available worldwide.

CONSTRUCTION

Construction professionals

We impress users with extensive know-how in the creation of perfectly optimised machines and tools and a fast repair service.

Trade & Rental

Our wide range of professional system solutions for construction-related applications is available worldwide.

Construction industry

The assortment of high efficiency diamond tools is tailored for the specific needs of customers in the construction industry.

Project services

Our project services team develops individual system solutions for customer-specific special construction applications.

Leading through true innovation

A passion for technology, many years of experience and a strong innovative spirit have been incorporated into the manufacture of outstanding grinding solutions.

With **CERABOND X**, Tyrolit sets a milestone in the abrasives market. The combination of ceramic grain and the unique Tyrolit bond system enables consistent cutting ability of the discs, combined with unique durability.

Tyrolit Power revolutionised the finishing of hard surfaces. Sanding strips consisting of layers made from cactus hair and diamond provide extreme hardness, save time and significantly reduce vibrations for the user.

With the future-oriented new **P-technology**, our team of experts has developed a new, more sustainable method to create the artificial porosity in our vitrified grinding wheels. With the new P-Technology, the artificial pores are created without naphthalene and are therefore more environmentally friendly.

Our patented **lightweight core technologies** enable us to improve customers' precision grinding processes, saving them time and money. This is possible through computer-calculated targeted material reductions or the use of natural fibres.

With our modular assistance system **ToolScope** we set a milestone for the digitalisation of grinding technology. The system allows customers to utilise existing data and through increased process transparency optimise their whole production chain.

MoveSmart is a novel monitoring system for the construction industry, connecting Tyrolit machines to the Internet of Things and processing user data directly on site and in real-time. A smart move into the future.

International production and sales locations

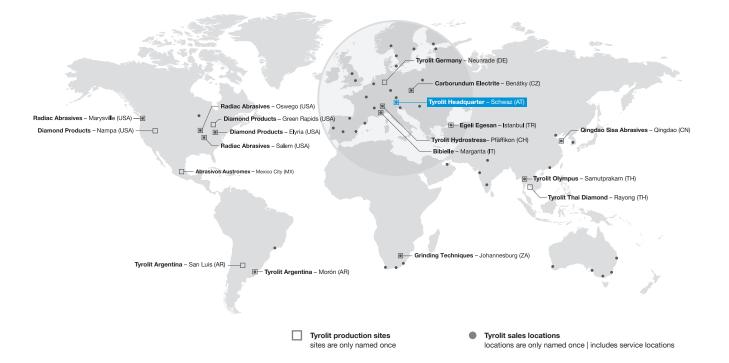

Tyrolit is represented in 29 countries through its own production and sales companies and cooperates in a further 65 countries with local partners.

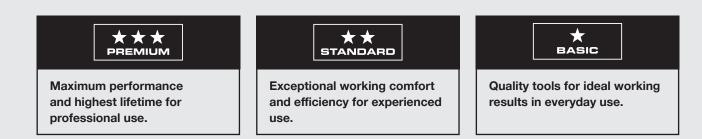

The European logistics centre in Benátky (Czechia)

Quality lines

To make your search for the ideal tool easier, we have divided our range into three performance levels. This enables us to offer the perfect solution for every application!

Always on the safe side

When developing tools and machines, safety is of the highest priority, both for the operator and for people in the work area. The Tyrolit development department is continuously working on improvements to increase protection and working comfort.

The oSa (Organization for the Safety of Abrasive Tools) was founded in 2000 for precisely this purpose. As a founding member, Tyrolit is clearly committed to the values of this organization:

- Worldwide protected label for the highest level of tested safety of cutting and grinding tools
- + Tested compliance with EN safety standards for abrasive products
- + Regular manufacturing controls and product monitoring
- Regularly audited manufacturer with certified quality management and documented processes
- + Powerful premium products with traceability to the manufacturer

oSa members commit to certified quality management with documented processes, which means that customers can rely on the highest quality and safety.

Products with these technologies are identified by these icons on the following pages.

Convincing, technologies

Tyrolit diamond tools with TGD[®] technology feature intelligently distributed diamonds that enable even load distribution, optimised cooling and a constantly high cutting performance.

Advantages:

- + Long lifetime
- + High cutting ability
- + Enhanced efficiency

Further information from page 14

OmniGrid[®] offers operators maximum flexibility so that work can be completed without interruption, even in challenging power conditions on the construction site.

Advantages:

- + Flexibility in terms of power supply
- + No interrupted work
- + Single-phase operation possible

Further information from page 15

Advantages:

- + High cost efficiency
- + Efficient working
- + Easy operation

Further information from page 16

TGD®+ technology is the further development of the TGD® technology and is characterised by an innovative sandwich bond system that enables different degrees of hardness and smooth transitions within the diamond segment.

Advantages:

- + Innovative sandwich bond system
- + Maximum efficiency
- + Targeted profile control

Further information from page 14

P2[®] TECHNOLOGY

P2[®] – PERMANENT POWER – is a high-frequency technology registered by Tyrolit, which combines the compact design of electrical systems with the reliability and performance of hydraulic systems in a single machine to optimum effect.

Advantages:

- + High reliability
- + Powerful performance
- + Compact design
- Further information from page 15

Advantages:

- + Overview of all machines
- + Increased productivity
- + Reduced service times

Further information from page 320

TYROLIT GRAIN DISTRIBUTION: TGD[®] and TGD[®]+

Tyrolit diamond tools with TGD[®] technology feature an intelligent distribution of the grain, known as TYROLIT GRAIN DISTRIBUTION, which enables particularly economic and efficient working in a range of applications.

The well-thought-out distribution of the diamonds supplies an even load distribution, optimised cooling system and consistently high cutting performance, which in turn increases the lifetime and reduces the load on the machines.

Building on the proven TGD[®] technology, the TGD[®]+ technology offers an increase in cutting performance of up to 25% and significantly revolutionises the machining of construction materials.

The TGD®+ technology is characterised by an innovative sandwich bond system that enables different degrees of hardness and smooth transitions within the diamond segment. In combination with different diamond grain qualities, this ensures improved smooth running and balanced load distribution. This targeted profile control minimises power losses and maximises efficiency, which enhances the segment's self-sharpening effect.

Applications such as core drilling and wall sawing benefit particularly from the advantages of TGD[®]+ technology. Time savings, reduced vibrations and improved cooling effect with the usual excellent lifetime characterise the TGD[®]+ technology and make it the first choice for professional operators.

Conventional segment

TGD[®] Segment

NEW OmniGrid[®] Technology

Thanks to the innovative OmniGrid[®] technology, concrete cutting work can be completed even with unreliable power supply, such as phase loss, low supply voltages or other disturbances. With OmniGrid[®], it is even possible to work in single-phase networks and with long cable lengths and thus with large distances to the power supply.

P2[®] Technology

P2[®] – PERMANENT POWER – is a high-frequency technology registered by Tyrolit, which combines the compact design of electrical systems with the reliability and performance of hydraulic systems in a single machine to optimum effect. This innovative drive concept is based on the principle of drive motors with permanent magnets and enables operation at a high torque, with simultaneously reduced motor speeds. The maintenancefriendly layout of the compact devices makes servicing easier and reduces costs.

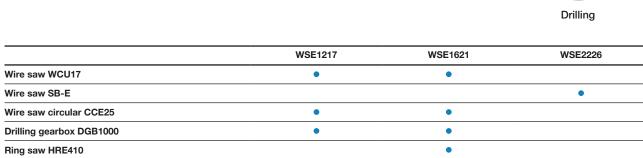

Tyrolit Modular System

Thanks to the Tyrolit Modular System, individual components can be used for the same area of application and for different applications. This not only makes the work easier and more efficient, it also saves on costs.

One part of the Tyrolit Modular System is the ModulDrill™ quick clamping system, for example, which enables our drill motors to be rapidly attached to different Tyrolit drill rigs.

Diamond wet drill bits

Drill bits for wet drilling

Decades of experience in the production and application of core drill bits and core drill systems give Tyrolit the edge in the marketplace.

As a result, our products can be viewed as innovative solutions for large-scale projects while remaining cost-effective for everyday construction site use. Especially suitable for drilling reinforced or normal concrete. Can be operated on a drill rig or hand-held. Tyrolit core drill bits are designed to work perfectly with Tyrolit Hydrostress machines.

TGD® Technology

The TYROLIT GRAIN DISTRIBUTION achieves a constant and high cutting performance due to optimum diamond grain distribution.

Speeds wet drill bits

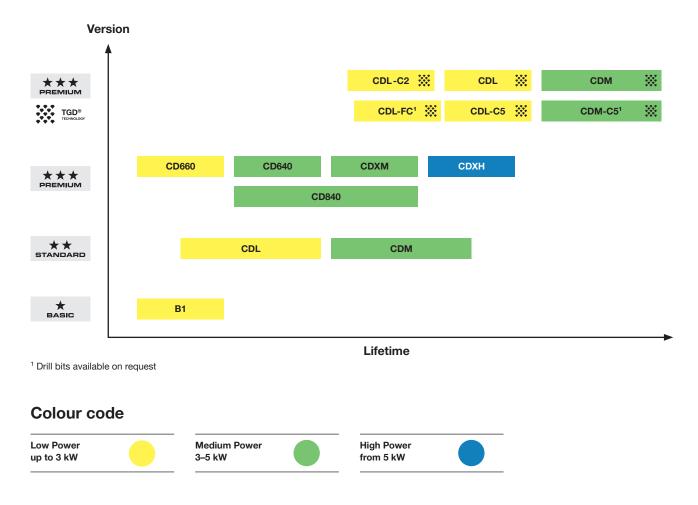

Service

- + Products for concrete (asphalt, masonry, steel and special applications on request)
- Mountings and connection threads available to comply with local standards and tailored to suit all types of motors (electric, hydraulic)
- + Perfect system solution in conjunction with Tyrolit Hydrostress drill motors and drill rigs
- + Extensive range of accessories available
- Special dimensions and individual solutions available on request
- + We will be pleased to provide technical support and system solutions for special construction sites

Information / Recommendations

- Highest levels of performance at peripheral speeds of 2 - 4.5 m/s on concrete (1.5 - 3 m/s on reinforced concrete, 4 - 4.5 m/s on very abrasive materials)
- For core drills with a diameter of 400 mm or more, we recommend to use the drill flange GR-F. The core drill program with GR-F flange is available on request (1¼"-4L = the combination GR-F with 1¼" adapter)
- + The correct drill rig mounting is essential
- The correct coolant quantity is also important for the optimum drilling performance ("milky" consistency of the water)
- + The machine safety and user instructions must be read and understood before starting work. The drilling safety manual will be sent to you on request

¹ Drill bits available on request

Clear colour coding for every drilling application

The dry and wet drill bits by Tyrolit have been specially developed to meet the various requirements of drilling work. Dry drill bits are ideal for applications where a water cooling system is not possible or not required. These drill bits are now available in black, which allows them to be clearly distinguished from wet drill bits. This colour coding makes it easier for operators to select the right drill bit for their specific requirements.

Wet drill bits, on the other hand, are designed for applications where a water cooling system is necessary to prevent overheating and extend the lifetime of the drill bit. These drill bits remain in the traditional blue colour, which distinguishes them from dry drill bits. The blue colour scheme indicates to operators that these drill bits are intended for wet applications.

The clear colour distinction between black dry drill bits and blue wet drill bits considerably simplifies the selection and handling of the drill bits. Operators can see at a glance which drill bit is suitable for their particular application, which increases efficiency and safety at work.

CDL-C5 Wet drill bits

for reinforced concrete | in TGD® Technology

 Consistently very fast cutting performance and noticeable smooth running with TGD® Technology (TYROLIT GRAIN DISTRIBUTION), a unique technology developed by Tyrolit for the optimised distribution of grain.

- + Ideal for processing reinforced concrete with a high steel content
- + Particularly easy to cut with very smooth running behaviour

Drill motors up to 3,5 kW | soft to medium-hard concrete aggregates. Quality tool for the highest demands and maximum economic efficiency. Outstanding and constant cutting performance with very smooth running behaviour, especially when used on medium-hard reinforced concrete with a high steel content. Segmented diamond drill bit with TGD[®] technology and segment height of 11.3 mm for universal use and problem-free core removal.

and a state of the

Thread core bits with diamond segments

The modern construction industry requires tools that are both powerful and versatile.

The thread core bits by Tyrolit with exchangeable drill heads enable drilling depths of up to 40 metres. The modular design and separate core catchers increase adaptability and ease of maintenance to realise deep drilling projects efficiently and precisely.

Precision and flexibility in deep drilling technology

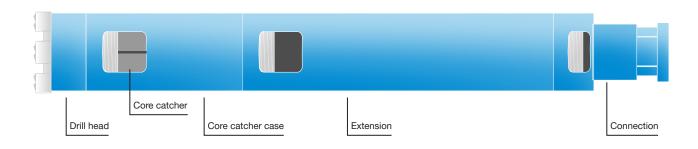

The Tyrolit threaded core bit with exchangeable drill heads is ideal for the construction industry as it is powerful and adaptable. The extensions allow a drilling depth of up to 40 metres in variable steps, while the core catcher and core catcher case simplify maintenance.

Product features at a glance

- Exchangeable thread drill bit heads with impregnated diamonds
- + Extensions up to 40 m drilling depth, extendable in steps of 0.25 / 0.5 / 1.0 m
- + Core catcher & core catcher case separated from the diamond wear module

Diameter in mm						
20	25	30	35	40	45	50
64	72	82	92	102	112	122
137	152	162	182	202	212	252
300	Diameter 300 mm on request					

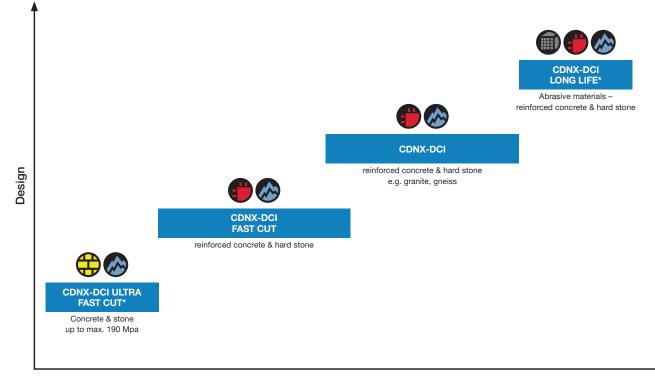

CDNX-DCI drill head with impregnated diamonds

- + Best results at peripheral speeds of 3-4 m/s
- + Exchangeable drill head with impregnated diamond segments
- + Good cutting ability and reliability
- + Recommended for reinforced concrete and hard rock such as granite and gneiss
- + For drill motors from 3.5 kW depending on diameter and application

Lifetime

Special solutions on request - connection for Dieckmann (type A or B) as well as surface-set diamonds or polycrystalline diamonds *on request

Stabiliser

- + To support the stabilisation of horizontal bores > 3 m
- + Where the tolerances of the drilling direction are very limited
- + Should ideally be used to stabilise approx. 1/3 of the drilling depth
- + Modular and flexible system

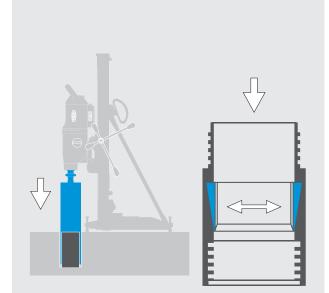

Drilling depth [m]	Stabilisation length [m]	Stabilisers - required pieces per drilling depth
2	-	-
3	1.0	2
4	1.5	
5	2.0	3
6	2.0	_ 5

15	5.0	
18	6.0	5
21	7.0	_
24	8.0	_ 6
>24	8.0	

Note: Stabilisers can reduce drilling deviations, but not prevent them if other factors such as drill stand misalignment or material fracture / material inhomogeneity are present.

Core catcher & core catcher case

- + Reliable and easy removal of the drill core
- + Two separate components, separate from the diamond wear module
- + The core catcher runs during drilling operation
- + The core drill is only clamped when it is pulled out of the bore

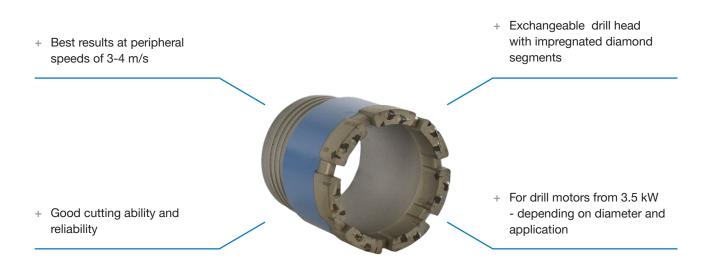

During drilling, the core catcher remains in the larger, conical area of the core catcher case. The core catcher is "open" and the drill core can pass.

When the core bit is pulled out of the bore hole, the core catcher slides forwards and "clamps" the drill core due to its conical shape, thereby taking it out of the bore with the core bit.

Diamond dry drill bits

DIAMOND DRY DRILL BITS

Drill bits for dry drilling

Decades of experience in the production and application of core drill bits and core drill systems give Tyrolit the edge in the marketplace.

As a result, our products can be viewed as innovative solutions for large-scale projects while remaining cost-effective for everyday construction site use. Especially suitable for drilling reinforced or normal concrete. Can be operated on a drill rig or hand-held. Tyrolit core drill bits are designed to work perfectly with Tyrolit Hydrostress machines.

Selecting the right dry drill bit

Diameter	≤ 82 mm	≥ 91 mm
approx. rpm [rpm]	2000 - 3000	1000 - 1500
Porous concrete (aerated concrete) Plastic piping (PVC, PP, PE) Lightweight refractory bricks Sandstone, porous natural stone Tiles Roofing tiles Clinkers Fine stoneware		thout et drilling
Soft sand-lime blocks Bricks Lightweight concrete blocks Woodchip slabs and blocks Concrete blocks		g recommended Imer drills!)
Hard sand-lime blocks Terrazzo Concrete Lightly reinforced concrete		ing necessary mer drills!)

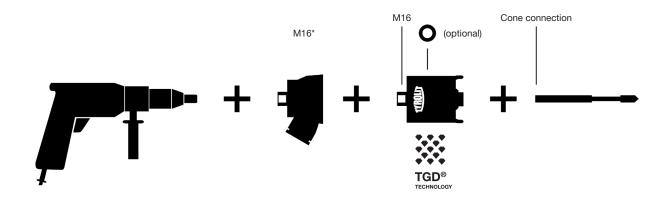

Service

+ From a diameter of 82 mm onwards an additional distance washer is included for optional use of a vacuum-suction hood

Information / Recommendations

- For use with drilling motors within the range of 1 000–2 000 W with or without soft impact
- + Do not use rotary percussion drills as it will destroy the tool
- + Observe the safety and user instructions shipped with the tool
- On request these safety instructions may also be sent separately

Dry drilling with compact universal dust extraction system

*Adapter suitable for all common machines (5/8", HEX SW12, SDS, M18) see page 73.

Dry drilling in reinforced concrete

When it comes to dry drilling, the Tyrolit experts know what counts. And our expertise from special projects, such as the safe decommissioning of nuclear power stations, is put to use in the development of our dry drilling product range. The Tyrolit dry drilling system is the first commercial system on the market that ensures easy and costefficient drilling in reinforced concrete.

One of a kind

- + Easy operation
- + Clean working without a compressor
- + Inexpensive
- Excellent results in reinforced concrete

Tyrolit dry drill bits in TGD[®] Technology

- + Durable, laser-welded segments
- + Ideal for drilling reinforced concrete
- + Large choice of usable lengths and diameters
- + Short lengths for hand-guided drilling

TGD® dry drill bits reliably drill reinforced concrete without deformation.

TGD® TECHNOLOGY

Drill motor DME19DP

- Switchable soft impact function and 1 ¼" and ½" attachments
- + Soft start system and LED monitoring display for optimum drilling speed
- + Centring aid for precise drill bit guidance

DDX dry drill bits

for reinforced concrete | with TGD®+ Technology

DDX dry drill bits for reinforced concrete | with TGD®+ Technology

Application:

- + For 3 kW drill motors with soft impact function with stand-guided setup
- Drilling reinforced concrete that could previously only be drilled with wet drill bits
- Technically, a hybrid application (dry & wet) is possible if low-wear materials (e.g. highly compressed precast concrete parts) have to be drilled in the wet process

Functional principle of the core stopper

The core with the integrated core stopper ensures that the dust extraction remains open continuously and thus dust can continue to be extracted even after the concrete core has broken. In addition, it ensures that the cooling system for the segments can be maintained at all times.

DDL-RM Dry drill bits for reinforced concrete | in TGD[®] Technology

In combination with the DME19DP drill motor, the dry core bits with TGD[®] smooth runnin technology are the perfect solution for dry drilling applications in reinforced concrete. They offer consistently fast cutting performance and noticeably

smooth running. This combination is ideal for stand-guided dry drilling and is characterised by a very long lifetime.

DDL-HH-FAST CUT Dry drill bits for lightly reinforced concrete & masonry | in TGD[®] Technology

The fastest, longest and lightest Tyrolit dry drill bit for hand-guided applications. The thread form of the steel tubes enables easy removal of the drilling dust via the extraction system. Spiral grooves ensure a noticeable weight reduction. Furthermore, the dry drill bits are specially

adapted to core drilling with soft-impact function and therefore in combination with the Tyrolit DME19DP drill motor the perfect solution for hand-guided dry drilling applications.

ê

Maximum drilling comfort and universal use

Tyrolit tile drills are high-quality tools that have been specially developed for clean drilling of tiles and ceramics. These diamond drill bits offer maximum drilling comfort and are suitable for both wet and dry application. They can be used universally and are perfect for use in sanitary areas.

WDT

The WDT tile drill bits have been specially developed for wet applications on tiles and ceramics.

DDT

DDT tile drills have been designed for dry applications and are ideal for waterfree drilling in combination with the Cool Gel. The Cool Gel ensures optimal cooling of the drill bit and prevents overheating.

DDT PARAFFIN

DDT PARAFFIN are diamond tile drill bits that are filled with paraffin. The paraffin melts during the drilling process and cools the drill bit. It is important to remove the drill core immediately after application to prevent overheating.

Tyrolit vacuum brazed diamond coring bit for all ceramic tiles, fine stoneware and marble slabs. Maximum drilling comfort, suitable for universal use with M14 connection for angle grinders, and adapter for drilling machines. Suitable for dry and wet drilling. Perfect, chip-free drilling in tiled and sanitary areas.

Drill motor DME19DP

Core drilling up to Ø 162 mm

The DME19DP in conjunction with Tyrolit TGD[®] dry drill bits is the solution for dry drilling applications in reinforced concrete. The practical centring aid ensures precise drill bit guidance and a longer diamond tool lifetime. Switchable soft impact function accelerates work progress, particularly in hard materials. The soft start and the LED indicator aid the user in selecting the optimal drilling speed.

Drill motor DME17DP

Core drilling up to Ø 200 mm

The DME17 is a 2-speed dry drill motor for drilling diameters up to 200 mm. The powerful 2.0 kW motor, in combination with the switchable soft impact, enhances the drilling performance in reinforced concrete and in other hard materials. The machine can be both hand-held and drill-rig operated. The compact design, low weight and integrated dust extraction system makes the core drill very user-friendly. This model is unique in that it is available in three speed versions (standard, slow and quick) and thus optimally covers the most varied of customer needs.

Drill motors DME20PW | DME20PU | DME20CW

Core drilling up to Ø 180 mm

The new generation of DME20 drill motors offers impressive drilling performance in the power segment up to 2 kW. The mechanical and electronic overload protection and the full metal housing ensure a high level of reliability. Built-in performance and service indicators and the levelling aid also enable simple operation. The DME20 drill motors can be used universally and cover a wide range of applications: wet/dry and handheld / rig-based (DME20PU), wet and hand-held / rig-based (DME20PW) and exclusively wet and rig-based (DME20CW).

Drill motor DME22SU

Core drilling up to Ø 180 mm

The DME22SU drill motor is ideal for electrical and installation work. It features a 3-speed transmission and variable speed setting with soft start. Integrated overload cut-outs and the PRCD safety switch ensure safe working. Dry drilling is also possible with the included M16 adapter.

Drill motors DME26MW | DME26UW

Core drilling up to Ø 250 mm

The DME26 with its powerful 2.6 kW motor is ideal for core drilling up to 250 mm. The 3-speed transmission together with additional speed control (starting and iron mode) ensure optimum drilling speed. The mechanical and electronic overload cut-out and the full metal housing guarantee high reliability. Built-in performance and service indicators and the levelling aid also make the control panel easy to use. The DME26 is available with various drill rig attachments (Module Drill[™] quick clamping system or universal plate).

Drill motors DME32MW | DME32UW

Core drilling up to Ø 350 mm

The DME32 drill motor in the 3.2 kW power class combines excellent drilling performance with a compact design. The mechanical and electronic overload cut-out and the full metal housing guarantee high reliability. The built-in performance and service indicator and levelling aid also make it easy to control the control panel. The 3-speed transmission together with additional speed control (on-drill and iron mode) ensure optimum drilling speed. The DME32 drill motor is available with the Modul Drill™ quick clamping system or universal plate drill rig attachments.

Drill motor DME52UW

Core drilling up to Ø 500 mm

Powerful 5.2 kW motor for 400 V 3-phase power supply

3-speed-gear with oil bath lubrication, oil pump and overload clutch

Robust plastic-foil keyboard, LED performance indicator and Softstart

The DME52UW is a powerful, watercooled 3-phase drill motor. Its 5.2 kW of power in combination with the oil-bath lubricated gearbox, provide optimum torque and rotation speed for a high drilling performance up to a maximum diameter of 500 mm. Full metal housing, overload clutch and motor thermal protection as well as IP 55 protection class guarantee maximal reliability. LED performance indicator, Softstart and antifriction-element ensure user friendly operation.

Modular electric drilling gearbox DGB1000

Core drilling up to Ø 1 000 mm

Optimised drill bit attachment for large bore drilling

ModulDrill™ quick change clamping system for quick, easy and safe attachment

Bores with a diameter of up to 1 000 mm with Modul-Drill™ distance plates

In accordance with the Tyrolit modularity principle, the DGB1000 delivers optimum rotational speeds and impressive performance in conjunction with either the electric high-frequency motor or hydraulic standard motor options, by means of 8 transmission stages – two speeds at the drilling gear box and up to four stages via the relevant drive. With optimised drill bit attachment for large diameters and high torques.

Drill hammer DHE32

Universal drill hammer up to Ø 32 mm

The 900-watt DHE32 combi drill hammer features drilling, hammer drilling, chiselling and chisel adjustment, making it the ideal all-rounder for minor chiselling work as well as setting anchors. This model is simple to use due to the quick tool change system, tool-less drill chuck removal, accelerator switch and long-term operation option. It has a highly ergonomic design combining low vibrations with high impact energy and a nonrotating additional handle.

Vacuum pump VPE600

Ultimate vacuum up to 900 mbar

Two water separators with filters, easily accessible from the outside

Dedicated power cord holder

The VPE600 is our new powerful and reliable vacuum pump. It is based on a dry-running (oil-free) rotary vane pump, resulting in a decisive advantage of the device – it is maintenance-free. In addition, the pump is equipped with an analog manometer, an illuminated on/off switch as well as a water separator with filter and is therefore ideally suited for daily construction site use.

Battery water pressure tank WTE60

With 60 litres capacity

The WTE60 is a large batteryoperated water pressure tank with a 60 litre capacity. With its rechargeable battery and powerful brushless motor, it offers high pressure and delivery performance with a long operating time. It has several operating modes, which are set to core drilling, cutting or cleaning. Its long transparent hose allows easy control of the water flow and can be conveniently stored in the hose holder to save space. Its robust transport wheels make it mobile and flexible to use.

Drill rig DRU160

Core drilling up to Ø 160 mm

The DRU160 is the lightweight among drill rigs up to Ø 160 mm. The standardised clamping collar system enables quick mounting of common drill motors. In addition, a centre indicator, angle indicator and spirit level enhance user-friendliness and help save valuable time during drill rig set-up. The anchor or vacuum attachment facility also increase flexibility.

Drill rigs DRA250 | DRU250

Core drilling up to Ø 250 mm

The DRA250 | DRU250 drill rigs offer impressive stability and drilling performance thanks to sturdy workmanship and robust drilling columns with wide gear teeth. The optimised support with sturdy roller guide guarantees precise drilling. The proven ModulDrill™ quick clamping system enables fast and secure

mounting of drill motors. In addition, a centre indicator (DRU250), angle indicator and two-speed feed gear enhance user-friendliness and help save valuable working time. The compact lightweight construction for easy transport, assembly and disassembly complete the system.

Drill rig BY

Core drilling up to Ø 300 mm

The BY dual rod drill rig combines a lightweight design with great stability. The accurate guide principle enables inclined drilling at any angle. This particularly compact core drill rig can be combined with a wide range of electric drilling motors. Thanks to its modular design, the drill rig can also be used for more powerful hydraulic drilling operations.

Core drilling system DRU350 MKII

Core drilling up to Ø 350 mm

Thanks to the intelligent design with a drilling and gripping column that can be rotated by 360°, diagonal drilling can be realised. An innovative telescope clamping system allows the drill rig to be attached in a time-saving and and gentle on the material. Various adjustment options, an extendable drilling column and various drilling accessories ensure universal use.

Drill rigs DRA400 | DRU400

Core drilling up to Ø 400 mm

DRA400 and DRU400, the professional core drilling systems for a versatile application range. The optimised support with sturdy roller guide guarantees precise drilling. The proven ModulDrill[™] quick clamping system enables fast and secure mounting of drill motors. In addition, a centre indicator, angle indicator and two-speed feed gear enhance user-friendliness and help save valuable working time. The compact lightweight construction for easy transport, assembly and disassembly complete the system.

Core drilling system DRA500 electric

Core drilling up to Ø 500 mm

Drilling column extensions from 230 to 910 mm

Maximum load capacity due to extra wide, high quality drilling column gearing

Bores with a diameter of up to 500 mm with ModulDrill™ distance plates

The DRA500, a drill rig for maximum stability and the highest demands during drilling. The proven ModulDrill™ quick clamping system enables fast and secure mounting of drill motors. Thanks to an extended drilling column, even long through-holes can be made with ease. Thanks to the modular design, combined use with Tyrolit cable saws and hydraulic equipment is possible without difficulty.

WALL SAWING

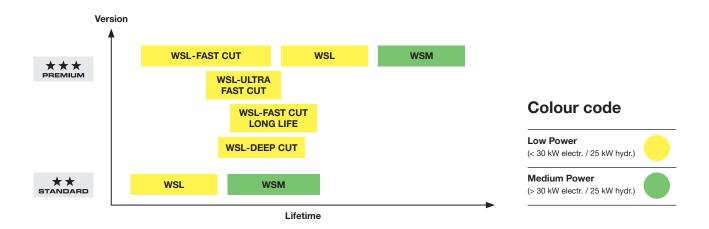

Wall saw blades

Decades of experience in the production and application of wall saw blades and machines give Tyrolit the edge in the marketplace.

The Tyrolit wall saw blades and machines system provides on one side innovative solutions for large scale projects and enables cost effective results for everyday construction use on the other side. Especially suitable for apertures and openings in walls or ceilings for concrete with or without reinforcement and wall thicknesses up to 100 cm. Tyrolit wall saw blades are designed to work flawlessly with Tyrolit Hydrostress machines. Wall sawing is a nearly vibration-free process that protects the buildings structure.

Application recommendation & information Tyrolit wall saw blades

Recommendations

- Highest levels of performance at peripheral speeds of 35–45 m/s on concrete
- + The correct coolant quantity is also important for optimum cutting performance
- + The machine safety and user instructions must be read and understood before starting work
- + The safety manual will be sent to you on request

WSM wall saw blades in 5.4, 5.9 and 6.5 mm segment width on request. For the perfect precut.

SILENT Wall saw blades

Noise-damped steel cores for optimum vibration damping. Ideal for use in noisesensitive areas. The 10 decibel reduction in noise level is perceived by humans as a 50% noise reduction. Tyrolit SILENT wall saw blades are only available with the 6M247 and 6M207 drive holes.

Even if the noise is perceived to be reduced by 50%, the prescribed personal protective equipment (PPE) must be used during the operation.

WSL-ULTRA FAST CUT SILENT Wall saw blades in TGD® Technology

For machines up to 20 kW electric. Highest cutting performance with low noise intensity. Highly recommended for normal infeed depths and very thick reinforcement.

DEEP CUT Wall saw blades

The WSL-DEEP CUT series: It provides wide segments at the beginning and can go blade wise narrower to the wanted cutting depth. This ensures a good opening on both sides of the steel core and for his reason the cooling water reaches the diamond segment in a good manner. **Laser welded wall saw blades are available up to Ø 1 600 mm.** Brazed wall saw blades are available from Ø 1 350 mm to 2 200 mm. Further diameters on request.

WSL-DEEP CUT Wall saw blades in TGD® Technology (up to Ø 1 600 mm)

For machines from 17 kW electric / 25 kW hydraulic. Quality tools for the greatest cutting depths in wall sawing.

Wall saw WSE912

Cutting depths up to 377 mm

The WSE912 is a compact and powerful next-generation wall saw based on highly energy-efficient P2® technology. The wall saw has a modular design, making it reliable and easy to maintain. Thanks to innovative OmniGrid® technology, its PPE12RR electrical control unit enables operation under changing power supply conditions. This means that any cutting job can be completed in 3-phase or 1-phase operation. The new generation of radio remote control is intuitive to use and has a long battery life. The newly designed transport trolley for the WSE912 is characterised by its compactness, versatility and large wheels.

Wall saw WSE1621

Cutting depths up to 705 mm

The WSE1621 was developed for universal usage and the daily use on the construction site. Thanks to the digital features and the compact and light design, this newly developed system is setting new standards in wall sawing. Assembly and disassembly are done in an instant thanks to the ultralight blade guard and the tool-free motor fastening. The radio remote control comes with a display informing the user about all important details during cutting. The game-changing P2[®] Technology allows for outstanding reliability combined with optimized power. Apart from wall sawing, this wall saw's motor and control unit can also be used for wire sawing and drilling.

Wall saw WSE2226QC

Cutting depths up to 1 005 mm

Developed for the toughest and most exacting applications thanks to a cutting depth of up to 1 005 mm, which is unique worldwide, the WSE2226QC wall saw is particularly suitable for major cutting tasks. The pioneering P2[®] drive concept enables the combination of extreme reliability and optimum performance with low service requirements and reduced service costs. The standard remote control and the motor quickconnection fastener enhance ease of use and safety at the workplace.

Wall saw FZ-4S

Cutting depths up to 1 005 mm

The "work horse" among hydraulic wall saws. Use of the quickseparation flange on the swivel arm provides simple, fast blade replacement and facilitates use in flush cutting applications. With the FZ-4S in conjunction with hydraulic drives with outputs of up to 40 kW, blade diameters of up to maximum 2 200 mm can be used.

Diamond wire

Decades of experience in the production and application of diamond wires and wire saw machines give Tyrolit the edge in the marketplace.

Suitable for clearance and demolition work, dismantling bridges, buildings and numerous other large-scale reinforced concrete structures. Virtually unaffected by wall thicknesses and steel content. Perfect in combination with Tyrolit Hydrostress machines.

Application recommendation

Performance Level	Туре	Type Bead		Machine		Concrete aggregate material			Level of reinforcement			Dry cutting		
		-	Brazed	Electro- plated	L	М	Н	Soft	Medium	Hard	Very hard	Low	Very high	100 %

Choosing the correct diamond wire

Machine			Material		Suitability	
Power			Aggregates		Optimal	•
Low	L	≤15 kW	Very hard	Flint	Good	•
Medium	М	15–25 kW	Hard	Quartz	Acceptable	0
High	Н	25–50 kW	Medium	Granite	Not suitable	
			Soft	Limestone		

Service

- + Can be supplied with locking mechanism attached on request
- + Can be delivered in unbroken lengths of up to 100 m
- + Technical support provided by our trained staff

Information / Recommendations

+ Optimum application conditions / wire speed

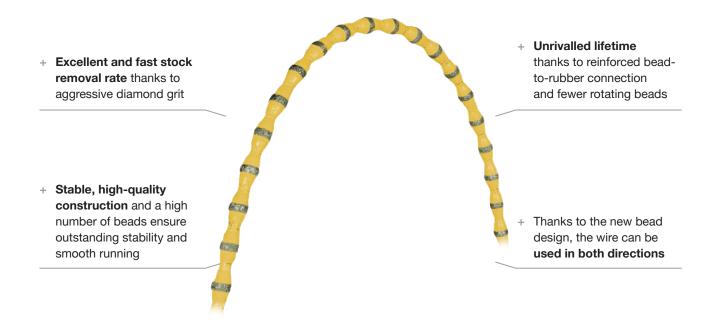

Concrete	soft aggregates with little reinforcement	21–25 m/s
Concrete	hard aggregates with high reinforcement	16–21 m/s
Steel	100 %	10–18 m/s

- + Assemble the connectors according to the instructions
- + Use only original Tyrolit accessories
- + Caution: Do not use shears for cutting. Use an angle grinder with a thin cut-off wheel
- The safety and operating instructions sent with the machine must be observed at all times when using diamond saw wires. The safety manual will be sent to you on request

DWM-CF Diamond wire

Electroplated | for concrete

Wire saw WCU17

Gross wire length 17 m

The wire saw with the extra large wire storage and long stroke for maximum utilisation and application for a maximum structure size of 12.6 m. Very finely adjustable feed with wire-conserving smooth starting for optimal control of the application, also thanks to the innovative damping system. The saw, consisting of only three ergonomically optimised main components, is assembled within a minute and can be placed directly on the object to be cut. Wire guidance is intuitive and simple. The expandable modular system can be driven both electrically as well as hydraulically by means of add-on kits.

Wire saw WCE18

Gross wire length 19 m

The wire saw has 15 m of wire storage and a powerful 18 kW high-performance drive for tough jobs in high-performance sectors such as controlled dismantling of large buildings. The continuously variable wire speed from 0-25 m/s and the precisely adjustable tensile force – thanks to pneumatic wire tension – help provide maximum cutting performance.

Technical data

Wire saw SB ATEX | SB-E

Gross wire length 15.5 m

The wire saw with plenty of wire storage packed within a compact and mobile casing featuring a powerful multiple pulley transmission. The SB can be driven by hydraulic power packs as well as by the modular WSE2226 system with its striking 26 kW drive motor.

Circular wire saw CCH25 | CCE25

Circular cuts of Ø 500-2 500 mm

As part of the modular Tyrolit systems, the circular wire saw can be driven either hydraulically (CCH25) or electrically (CCE25). The covered wire guide ensures safe application and the well-thought-out design ensures simple handling.

Floor saw blades

Decades of experience in the production and application of floor saws and machines give Tyrolit the edge in the marketplace. As a result, our products can be seen as innovative solutions for large-scale projects while remaining cost-effective for everyday construction site use.

Tyrolit floor saw blades are designed to work perfectly with Tyrolit Hydrostress machines as well as all common floor saws.

- + Exceptional and consistent cutting performance coupled with a long service life
- + Universal use
- + Innovative diamond segment design
- + Quiet when working on reinforced concrete
- + Clean cutting edges
- + Large product range: diameters from 300–1 200 mm in various segment widths

* with V-belt drive

Service

- + Bores and drive holes for special machines are available on request
- + Larger diameters are available on request

Information / Recommendations

+ Optimum application conditions / peripheral speed

Asphalt		55–60 m/s
Cured concrete	soft aggregates with little reinforcement	40–50 m/s
Cured concrete	hard aggregates	35–45 m/s
Green concrete		50-55 m/s

+ The safety and operating instructions sent with the machine must be observed at all times when using floor saws. The safety manual will be sent to you on request.

FSX-C3 Floor saw blade

for cured concrete | in TGD® Technology

+ Consistently very fast cutting performance and noticeable smooth running with TGD® Technology (TYROLIT GRAIN DISTRIBUTION), a unique technology developed by Tyrolit for the optimised distribution of grain.

Machines from 50 kW / hydr. >75 kW | Universal, soft to very hard concrete aggregates. Details: Laser welded up to a diameter of 1 200 mm. Special segment shape with a protective function to guard against premature steel blade wear in the contact zone – (undercutting-effect).

 FSX-C3 Floor saw blade for cured concrete | in TGD[®] Technology

FSL-A Floor saw blade

for asphalt

 Inclined protective segments to guard against premature steel blade wear in the contact

zone – (undercutting-effect).

Machines up to 25 kW | soft to very hard aggregates. Details: Laserwelded up to a diameter of 800 mm. With protective segments to guard against premature steel blade wear in the contact zone – (undercuttingeffect).

+ Consistently fast cutting

using wide spacing.

performance, long lifetime

A 35–25.4 mm reduction bush is supplied for saw blades with a 35 mm bore. Suitable for renovation, controlled demolition and demolition of roads, highways, airports, bridges and industrial buildings. Also for removing damaged concrete ceilings and for ceiling breakthroughs up to a thickness of 50 cm. An extremely fast cutting feed, a very long service life and a low cutting pressure, which protects the machine, characterize the tools.

Floor saw FSE808

Cutting depth up to 320 mm

The electric floor saw FSE808 has been specially developed for locations that are difficult to access and allows a quick change from left to right cutting. The floor saw operates emission-free and low vibration, making it particularly suitable for cutting work on and in buildings. The saw also has a step-less cutting depth adjustment via a threaded spindle with cutting depth indication. The fold-up saw cover allows effortless over-cuts. For easy transport, the floor saw can be dismantled into several handy assemblies.

Floor saw FSE1022

Cutting depth up to 420 mm

The robust, powerful floor saw FSE1022 was specially developed for cutting tasks in buildings. The frequency converter enables the continuously variable adjustment of the cutting shaft speed, making it possible to set the optimum cutting speed for every saw blade diameter. The low centre of gravity and precise distribution of weight on the axes ensure stability and excellent directional stability.

Drive PPH25

Power 25 kW

The 2-stage control ensures optimum cutting speeds for all applications. A simple and uncomplicated drive with product features reduced to the essentials.

System & Accessories

Technical data

Power	25 kW
Hydraulic	
Pressure stages	2
2 feed circuits	Gear wheel
Main circuit	Dual gear pump

System & Accessories

Drive unit PPH	125	
10984200*	Drive unit PPH25 / 380-420 V / 50 Hz	
976206	Hose package 5 pieces 8 m FD	
975672	Hose package 2 pieces 8 m FF (feed)	

973074	Elplug CEE 63/5 pol.	
999578	On/off valve for wire sawing	
* Different volta	ge and frequency types are available upon request.	

Power

Stage 1	45 I/min at 230 bar
Stage 2	50 I/min at 200 bar

Electric

Voltage	400/480 V
Frequency	50/60 Hz
Current consumption (400 V / 50 Hz)	42 A

Dimensions & Weight

Length	720 mm
Width	475 mm
Height	988 mm
Weight	145 kg

Drive PPH25RR

Power 25 kW

PREMIUM

The 4-stage control ensures optimal cutting speeds for all applications and the potentiometer of the remote control ensures a wire-conserving smooth start / soft start.

DCU dry cutting saw blades

for universal construction materials | in TGD[®] Technology

🔆 🖆 – 🏟 🗘

Application:

- + For machining concrete, reinforced concrete, cellular concrete, natural stone, clay bricks, masonry and hard materials
- + Suitable for all common angle grinders up to Ø 230 mm and for all common cut-off machines from Ø 300 mm (also for wet cutting)

We recommend:

+ For all reinforcement levels

Features:

- + Tyrolit TGD® technology enables optimum cooling and increases the productivity without effort thanks to intelligent diamond distribution
- + Excellent cutting performance thanks to the self-sharpening system of high-quality, concentrated diamond grits in an optimised bond
- + Maximum efficiency and unrivalled results thanks to maximum cutting ability and longest lifetime
- + Robust, high-quality steel cores ensure stability and noticeably smooth running

DCU-FAST CUT dry cutting saw blades for universal construction materials

Application:

- + For machining concrete, cellular concrete, natural stone, roof tiles, clay bricks, masonry and hard materials
- + Suitable for all common angle grinders

We recommend:

+ For fast and clean concrete cutting

- + Excellent and fast cutting performance thanks to the self-sharpening system made from high-quality, concentrated diamond grit in an optimum bond
- + Clean cutting edges thanks to the closed cutting edge
- + Robust, high-quality steel cores ensure stability and noticeably smooth running
- + Maximum efficiency thanks to maximum cutting ability and longest lifetime

DCU-FAST CUT dry cutting saw blades for universal construction materials

Application:

- + For machining concrete, cellular concrete, roof tiles, clay bricks, masonry and hard materials
- + Suitable for all common angle grinders

We recommend:

+ Particularly suitable in the sector of gardening and landscaping

Features:

- Very good and fast cutting performance thanks to self-sharpening system made of high-quality, concentrated diamond grit in an optimum bond
- + Clean cutting edges thanks to the closed cutting edge
- + Robust, high-quality steel cores ensure stability and noticeably smooth running

DCU dry cutting saw blades for universal construction materials

Application:

- + For machining concrete, reinforced concrete, clay bricks and masonry
- + Suitable for all common angle grinders up to Ø 230 mm and from Ø 300 mm for all common cut-off machines (also for wet cutting)
- + Reduction bush 20-16 mm is supplied with Ø 105 mm

We recommend:

+ For lightly reinforced concrete

Features:

- + Good cutting performance thanks to self-sharpening system of high-quality diamond grits in an optimum bond
- + Good cooling effect and chip transport ensure a long lifetime and standing time
- + Robust, high-quality steel cores ensure stability and noticeably smooth running

DCCI Combi cutting and chamfering disc for plastic tubes

Application:

- + For machining PVC
- + Suitable for all common angle grinders

We recommend:

- + Also suitable for rubber, composites and carbon fibres
- Features:
- + Large grain protrusion enables increased feed and excellent cutting performance
- + Easy handling and time-saving, as cutting and chamfering can be carried out simultaneously
- + Maximum lifetime thanks to ideal grain connection to the core blade
- + Robust, high-quality steel cores ensure stability and noticeably smooth running

Shape	Type number	Dimension	Segment height
UC3	34228075	125×3×22.23	3

DCCI Diamond cut-off wheel for grey and spheroidal cast iron

Application:

- + For machining cast iron, grey cast iron and spheroidal cast iron
- + Suitable for all common angle grinders

Features:

- + Large grain protrusion enables increased feed and excellent cutting performance
- + Maximum lifetime thanks to ideal grain connection to the core blade
- Robust, high-quality steel cores ensure stability and noticeably smooth running

DC ALL for all materials

Application:

- For machining universal building materials, concrete, cast iron, hard stone, marble, nonferrous metals, abrasive materials, wood, plastic, composites, fibreglass and bullet-proof glass
- + Suitable for all common angle grinders up to Ø 230 mm and for all common cut-off machines from Ø 300 mm (also for wet cutting)

We recommend:

+ Cuts almost all materials in the sanitary sector, for interior work or for gardening and landscaping

- + Large grain protrusion enables increased feed and excellent cutting performance
- + Increased productivity as tool changes are no longer necessary
- + DC ALL FAST CUT are particularly easy cutting, comfortable and low-dust, as they are particularly thin
- + Ø 300, 350 & 400 mm have shot-peened bases of slots and guarantee even more safety ideal for rescue and firefighting operations

Diamond cup wheels

Diamond cup wheels for angle grinders

Tyrolit diamond cup wheels enable quick and accurate grinding of uneven concrete, stone and floor pavement surfaces. In addition to their universal range of applications, high stock removal rates and a long lifetime are main characteristics of Tyrolit diamond cup wheels.

Service

- + Quick delivery
- + Available in all relevant diameters
- + Conventional dimensions on stock

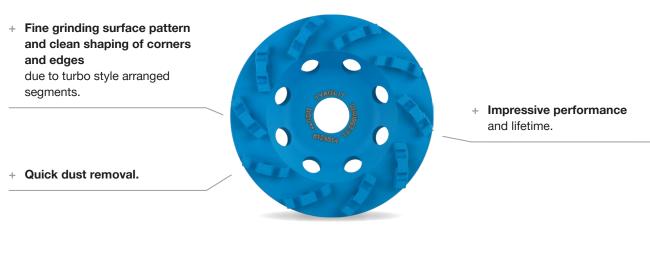

Remarks / recommendations

- + Observe safety and user instructions
- + On request safety instructions may also be sent separately

DGU-Turbo Diamond cup wheels

for universal building materials | W-Segment

Machinable materials: Concrete, natural stone and general building materials. Details: Turbo style arranged segments for a fine grinding surface pattern and shaping of corners and edges. Quick dust removal. A 22.23–16 mm reduction bush is supplied with a wheel diameter of 100 mm.

NEW

PREMIUM TWINFLAP D/C flap discs

for porcelain stoneware and tiles

Application:

- + For the machining of porcelain stoneware, tiles, ceramics, granite, marble, natural stone, artificial stone, concrete and glass
- + Ideal for grinding, chamfering, leveling, mitring and smoothing edges and surfaces
- + Suitable for all common angle grinders

We recommend:

- + DGT-DC 60 for maximum stock removal
- + DGT-DC 120 for fine work
- + DGT-DC 200 for finishing

Features:

- + High cutting ability for fast and effective stock removal
- + Universally applicable thanks to the use of diamond grain and silicon carbide
- + High user-friendliness and intuitive handling
- + Lightweight, compact design for low-vibration and low-noise processes

CERABOND X Cut-off wheels for steel and stainless steel

Application:

- + For machining different steel and stainless steel grades
- + For cutting very hard, challenging workpieces and solid materials

We recommend:

- + 1.0 to 1.9 mm for fastest cutting and minimum burr formation
- + 2.0 to 3.0 mm for long lifetime and maximum stability

Features:

+ Shortest cutting times due to the structure of the ceramic grain used

- + Extremely sharp cut-off wheel enables the user to work very comfortably and with little effort
- + Very long lifetime on hard and demanding materials

2-in-1 cut-off wheels for steel and stainless steel

Application:

- + For machining different steel and stainless steel grades
- + For cutting metal sheets, profiles, pipes, rods and solid material

We recommend:

- + 1.0 to 1.9 mm for fastest cutting and minimum burr formation
- + 2.0 to 3.5 mm for maximum lifetime and stability

- + The chemical purity of the product prevents corrosion, pitting corrosion and reduction in fatigue strength for the best results even on stainless steel
- + Extremely short working times thanks to excellent cutting ability and a low thermal load on the workpiece (heat build-up)
- + High level of comfort thanks to easy-cutting specification

CUT AND GRIND

for steel and stainless steel

Features:

- Thanks to CUT AND GRIND, applications such as grinding, deburring + and shaping as well as cutting and plunging are possible with only one tool
- Thinner width of 2.0 mm with DEEP CUT PROTECTION offers + additional safety for the operator and prevents bore breakout in the event of contact with sharp-edged workpieces

for steel and stainless steel

Application:

For demanding applications on different steel and stainless steel + arades

We recommend:

- + 4 mm thickness for peripheral grinding
- 6 and 7 mm thickness for rough grinding +
- 8 mm thickness for rough grinding with enhanced lifetime +

Features:

- Bond with coarse grain and a new layer composition enables quick + and convenient use with minimal exertion
- Comfort Start ensures a comfortable start when grinding and + increases the level of working comfort
- Maximum abrasiveness and lifetime +

★★★ 2-in-1 flap discs for steel and stainless steel

Application:

- + For demanding grinding applications on different steel and stainless steel grades
- + For welding seam finishing as well as edge and surface grinding

We recommend:

- + Grit size 40/60 for high stock removal
- + Grit size 80/120 for fine work
- + Best results when used on powerful angle grinders

Features:

- + Maximum stock removal rates
- + Very long lifetime
- + Chemical purity prevents corrosion, pitting corrosion and reduction in fatigue strength for the best results on stainless steel

Blade diameter of 125 mm

The compact AGE125 angle grinder is useful for a wide range of applications and is a must-have for any craftsman, with its durable motor, high level of efficiency, and electronics with features such as a soft start, restart and overload protection. The anti-kickback feature turns off the motor on the disc being blocked, ensuring safe operation. Effective cooling and extensive dust seal increase the lifetime of the angle grinder. In addition, the blade guard is tool-free adjustable and the slide switch is lockable.

Angle grinder AGE230

Blade diameter of 230 mm

The AGE230 is a handy, streamlined Ø 230 mm angle grinder with vibration damping and longer handle, incl. a soft inlay for secure grip, a soft start feature and a blade guard that can be adjusted without tools. The robust steel transmission and a protected metal spindle bearing ensure reliability in use and a longer lifetime. As you would expect, this model has restart protection in case of power failure, a lock-on/off switch and a spindle lock.

Wall chaser HCE150

Max. slot depth 45 mm

The HCE150 wall chaser is the ideal machine for cutting grooves and ducts in concrete, sand-lime brick or masonry. The slot width can be adjusted in 1 mm steps in the range 7-46 mm and the depth of cut can be continuously adjusted up to 45 mm. The supplied 3-blade spacer set permits faster breakout through

a centre slot. An optional 4-blade arbour is available as an accessory. The ergonomic planer handle ensures convenient handling and precise cut guidance. Cleaner working with minimum dust is guaranteed by a closed folding hood and an integrated vacuum cleaner connection.

Handheld concrete grinder HGE125

Grinding width 125 mm

The HGE125 handheld concrete grinder is ideal for preparing surfaces, smoothing unevenness and removing coatings. The integrated speed control permits grinding of a wide range of construction materials and ensures optimum grinding speeds for every application. The fold-up front part of the protection cover allows grinding right up to the edge of the working surface. The ergonomic position of the handles leads to a better grinding result. Cleaner working with minimum dust is guaranteed by a brush rim and an integrated vacuum cleaner connection.

Hand- and ring sawing

Hand- and ring saw blades

The leadership of Tyrolit is based on years of experience in the fields of production and application of hand saw blades. This allows us to provide innovative solutions for large scale projects and at the same time, our tools achieve efficient results in everyday use at construction sites.

Hand saw blades are especially suitable for openings and breaking through walls or ceilings with minor depths. Tyrolit ring saw blades convince with quick and simple handling and clean cutting edges. The outstanding cutting performance remains constant over the whole blade lifetime. The range of Tyrolit products covers all common applications and machines (electrical, hydraulic, petrol driven).

Application recommendation

Operation only for wet cutting

Hand saw HBE400

Cutting depth up to 150 mm

The HBE400 is a 3.2 kW hand-held saw for cutting depths up to 150 mm. In combination with our accessories kit, this hand-held saw is excellently suited to flush cutting. This model can be used for both wet and dry applications and its integrated dust extraction connection enables clean working. The compact design, low weight and detachable guide rollers guarantee ease of handling and machine guidance for the user. The 230 V electric drive enables flexible working indoors and outdoors.

Ring saw HRE410

Depth of cut up to 300 mm

The HRE410 is an electric hand saw for wall and floor cuts to a depth of 300 mm. The ring saw is an ideal supplement to the WSE1621 wall saw system, enabling work without overcuts and therefore provides a better alternative to corner drilling or diamond chain saws. The combination of a powerful 6.5 kW P2[®] motor and Tyrolit ring saw blades ensures exceptional cutting performance – for fast, precise work. The intelligent ergonomics are another feature of this machine; the rear and front handle can be adjusted to enable an ideal position for cutting with less fatigue.

Diamond saw blades for table saws

Tyrolit table saw blades impress with an excellent cutting performance and a long lifetime. They are optimised for the relevant material or application.

Tyrolit table saw blades are developed to work perfectly with Tyrolit Hydrostress machines and therefore meet all cutting work challenges and deliver the best results.

Application recommendation

Tile saw TTE250

Cutting depth up to 60 mm

Innovative telescopic system makes long cuts possible

Additional deployment options due to cap cutting function with adjustable cutting depth

Precise angle and mitre cutting using included stops

The TTE250 is a portable professional tile saw that combines large cutting length with small overall dimensions. Numerous settings and application options ensure maximum flexibility. The saw is easy to clean thanks to the detachable water tray made from high-quality and robust plastic.

Compact design, lightweight construction and an optional foldable table make it easy to transport and position on a job site. The fine-tuning between machine and diamond tool as an integrated system guarantees optimal cutting performance.

Masonry saw CSE350D

Cutting depth up to 125 mm

The CSE350D is a professional dry masonry saw that is particularly suitable for chop cuts thanks to the variable cutting depth. One of the highlights of this saw is its innovative dust extraction system, that collects dust directly by the saw blade and thus ensures clean working environment. Numerous settings and application options ensure maximum flexibility. Compact design, lightweight construction and an optional foldable table make it easy to transport and position on a job site. The fine-tuning between machine and diamond tool as an integrated system guarantees optimal cutting performance.

Cellular concrete band saw TBS510

Cutting height up to 510 mm

Fast, simple saw band replacement thanks to quick-release fastener

Automatic saw band shutdown ensures no unnecessary load on the saw band

Constant and optimum saw band tension for excellent cutting accuracy and long life time

The TBS510 cellular concrete band saw is designed for the machining of cellular concrete and all kinds of bricks. The ideally sized saw band rollers guarantee durability and the automatic saw band tensioning system enables consistent band tension for exceptional cutting accuracy and reduced risk of fracture on the saw band. A particular feature is the low need for maintenance ensured due to the direct drive of the saw band wheels. Cuttings are removed freely thanks to the large opening in the lower saw roller box.

Filter press SPP400

Cake volume 2.4 litres

The SPP400 filter press was specially developed for small construction sites and, due to its compact design, is the most mobile and easiest to use filter press on the market. Thanks to its low weight, patented air cushion technology and trolley chassis, one-man operation is no problem. With this filter press, Tyrolit enables concrete and stone slurry to be disposed of in an expert and environmentally friendly way. The recycled water can be discharged into the sewers or reused without problem, and the residues (cakes) in the filter can be disposed of at low cost as building rubble.

Digital Asset Management

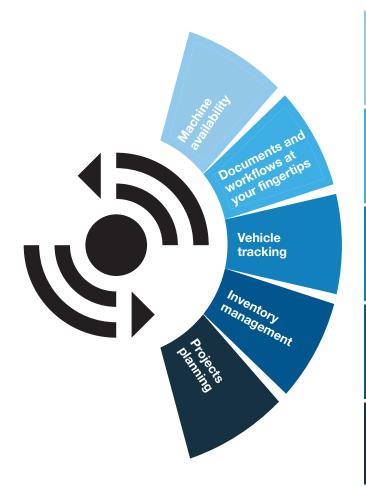

Tyrolit's innovative asset management platform MoveSmart and the respective hardware offer realtime operating and user data for assets and machinery. Thus, MoveSmart makes a significant contribution to increasing efficiency in companies.

In conjunction with the respective MoveSmart hardware and equipment tracking, you get an overview of where and when your equipment is currently being used. At the same time, MoveSmart provides up-to-date service and safety statuses and, thus, enables maintenance planning in advance. This not only avoids asset failures and idle times, but also increases occupational safety. Moreover, MoveSmart offers vehicle tracking, inventory management for small parts and a detailed project planning in one platform. With MoveSmart, construction sites, maintenance and repairs can be conveniently planned via the web version or mobile phone app.

Contact: construction.digital@tyrolit.com +43 664 82 92 974

Always know which machines are available. We ensure your asset location and readiness through inventory overview and simple, digital damage reports. Moreover, with our state-of-the-art hardware, we enable you to locate and track your assets.

All relevant documents and workflows at your fingertips. With MoveSmart, you avoid unnecessary paperwork and have all documents linked with the respective assets. In addition, our customisable ticket system allows for individual workflows for all customers.

Vehicle tracking and trip recording for your fleet. The MoveSmart car tracker hardware enables accurate vehicle tracking of your fleet. Moreover, the trip recording documents all trips and makes the data available for tax or billing purposes.

Inventory management to keep track of your stock. For small parts and consumables MoveSmart offers an inventory management tool, which allows you to always keep an eye on your stock levels and to react immediately, no matter where you are.

Plan your projects and orders quickly, easily and directly with your assets.

Profit from proactive project management and avoid idle times and unnecessary driving times.

Maximum flexibility and compatibility for your business

In order to guarantee maximum flexibility and compatibility, we offer three different packages. Each package offers a suitable solution to tackle your specific business requirements:

Asset management

- + Detailed overview of all assets
- + Maintenance workflows
- + Document management
- + Malfunction and damage report
- + Cost monitoring

Tracking & Digital forms

- + Basic services
- + Localisation of all connected assets and vehicles
- + Digital forms and customisable workflows
- + Exam handling
- + Overview of the actual use of assets

Planning & Order processing

- + Basic and standard services
- + Project and deployment planning
- Overview of all existing projects and assignments
- + Vehicle tracking and logbook
- + Inventory management for small parts and consumables

On request, we also offer the following services:

- + On-site analysis
- + Data integration
- + Attaching hardware to equipment
- + Additional trainings

- + Implementation of customer-specific user requirements
- + Creation of customer-specific reports
- + API-integration

MoveSmart hardware

With the appropriate hardware, both assets of Tyrolit as well as assets of other manufacturers can be integrated into MoveSmart. Depending on the software package and applications, we offer the appropriate hardware: From adhesive QR codes, which can be used to identify the equipment, to trackers that transfer machine data and are able to read out locations. The wall saw WSE1621 is already equipped with the matching hardware and can be integrated at any time.

Shining results with the **new floor grinding assortment by Tyrolit**

Tyrolit shines with a new and wide range of floor grinding products. The optimised machines and tools for surface preparation and floor grinding achieve perfect results. In addition to specially developed floor grinders and corresponding tools, the new range also includes various machines for removing different types of surfaces or coatings, chemicals, dust extraction systems and polishing tools. This new range opens up a multitude of floor grinding possibilities for the customer, and it all from a single source – which is totally in line with the Tyrolit spirit.

Discover the extensive range of floor grinders.

Tyrolit offers a professional assortment of machines and tools for grinding the concrete surfaces and provides on-site project management support.

Range of machines

Machines in various power classes are available for the machining of concrete surfaces on airport roads and runways.

Tool range

Excellent results can be achieved in combination with tools that are optimally matched to the application. Depending on the requirements and machine, up to 250 diamond saw blades can be mounted on one shaft.

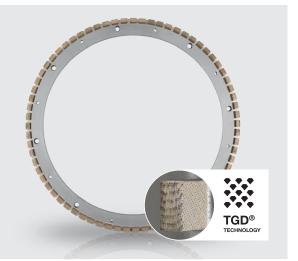

BGX-C3 diamond saw blade in TGD® technology

Brick grinding

New standards in **brick grinding:**

- + Versions available in different dimensions and for various machines and ring types
- + TGD® technology for productive and accurate grinding
- + Segment size 24 × 15 × 20 mm
- + Pre-sharpened segments for optimum grinding sanding result right from the start
- + LONG LIFE variants available for abrasive bricks and heavy materials

Contact for customised variants: construction@tyrolit.com

Tyrolit Project Services Special project services at the highest level

Tyrolit is known for reliable diamond technology and premium products. However, we offer much more than merely products for classic areas of application. In addition to renovation solutions, the demolition of bridges and other large-sized structures made from steel and steel-reinforced concrete, the Tyrolit Project Services Team offers competent support even in delicate surroundings, such as nuclear power plants or offshore platforms.

Adaptable product solutions let customers reach their goals efficiently and economically

For special applications in complex projects, the Tyrolit Project Services Team delivers sophisticated solutions that can be adequately adjusted to the customer's requirements. In addition to the classic concrete drilling and cutting equipment, for example, we offer our customers drilling systems for large-scale drilling diameters and depths, curved tracks or pile cutters for separating pipes and pillars. The adaptation of the products is usually fast and straightforward – true to Tyrolit's philosophy to support customers to get their job done as quickly and efficiently as possible.

The professional partner in controlled decommissioning Tyrolit is an especially strong partner in the controlled decommissioning of nuclear power plants and offshore facilities – the supreme discipline of special construction projects. In such high-stakes operations, not only an extremely professional manner of proceeding, but also a great deal of experience is required, no matter where these projects take place. In the past, Tyrolit has already supported customers all over the globe, for instance with the restoration of water dams in Australia and South America, with underwater-cutting in the Atlantic Ocean, or with the decommissioning of nuclear power plants like the one in Belene (Bulgaria).

The only ATEX-certified wire saw system worldwide comes from Tyrolit

The unique ATEX-certified wire saw system by Tyrolit is mainly used for cutting pipes or other steel structures in working environments where explosion-hazardous gases can escape. Tyrolit is the first supplier worldwide to fulfil the stringent European Union explosion protection directive.

- + Certified for explosion hazardous areas (EX Zone 1, II 2G, IIA c T3)
- + Modular, combinable system, also suitable for the use with already certified drives
- + Robust DWH-S ATEX diamond wire with a very high cutting performance,
- an outstanding lifetime, noticeable smooth running and a high number of beads + Hydraulic SB wire saw with large wire storage (up to 10 m), high power transfer
- thanks to multiple roller transfer, and hydraulic wire tensioner + PPH40RR drive with certified protective cabin
- + FFH40hh drive with certilied protective
- + For all metals except for titanium
- + Wire speed 10 max. 18 m/s

Our services for special projects comprise

- + Feasibility studies
- + Planning concepts
- + Principle sketches
- + Customised products for machines & tools
- + Project management
- + Trainings

Service provider and system supplier

Tyrolit offers a wide range of services and solutions designed to maximise customer efficiency and productivity. As a service provider and system supplier, Tyrolit is committed to supplying tools and machines that deliver success.

The dedicated team of application engineers and training experts goes one step further and offers on-site training. They bring practical experience, address specific needs and ensure a personalised learning journey. Tyrolit understands the importance of accessibility and convenience in today's business world. That is why there are various ways to get in touch and get support. Whether it's the efficient EDI ordering system, the convenient B2B web shop, personalised sales support or tailored training from application engineers – as a system provider, Tyrolit offers everything for the customer. With Tyrolit, you are always just a click or call away from getting support and help.

Further information and contact details can be found on our website.

Service performance

Tyrolit offers a wide range of services to ensure that machines and tools are always in perfect condition:

- Preventive inspections: Tyrolit carries out a preventive inspection once a year to ensure the safety and functionality of the machines
- + Certified safety and function checks: all test certificates are documented and only tested Tyrolit spare parts are used.
- + Technical support: the technical support team is available at all times to answer questions and solve problems.
- + Software updates: all software updates are included in the service contracts.

SERVICE CONTRACTS

Tyrolit offers a range of different contracts customised to individual needs:

★ BASIC

- + Annual preventive inspection
- + Certified safety and function check
- + Documentation of all test certificates by the manufacturer
- + Use of tested Tyrolit spare parts
- + Availability guarantee for spare parts
- Personal customer care and technical support
- + All software updates

+ Contract term: 4 years

Payment interval: annually or completely in advance

Safety

Safety and the brand Tyrolit

Our aim was and is to make our products even safer for our users:

Through our work as the founder member of the "Organisation for the Safety of Abrasives" (oSa®), through close cooperation with the safety authorities and through practical communication with our users all over the world.

For safe working with grinding tools, it is necessary that

- machine manufacturer
- abrasive manufacturer and
- operator

contribute their part in equal measure. Tyrolit guarantees that the tools meet the requirements of the oSa® and the European standards. The CE marking of our machines guarantees the complete compliance with the applicable EU safety requirements.

Tyrolit recommends not to use grinding tools, which do not have the symbols oSa®, EN13236 (diamond tools), EN12413 (cutting and grinding wheels) or EN13743 (flap discs).

Assembly / repair

Diamond tools must be visually inspected for cracks or other possible damage before mounting. Don't use damaged diamond tools!

The dimension of the diamond tool must correspond to the information on the machine and shouldn't exceed those.

Make sure that the maximum operating speed (RPM) of the tool is not exceeded.

Please note when mounting, that the arrow on the diamond tool corresponds with the direction of rotation of the machine.

Make sure the bore of the diamond tool fits the machine spindle properly – the bore must not be manipulated.

Make sure that the machine spindle is clean and intact. An out of round condition will cause damage to the blade and the saw. Flanges should be clean, flat, of equal size and of the proper type for the diamond tool. Don't use damaged flanges.

The diamond tool must be properly mounted, rotate freely and the flanges must be tightended properly. Never force a wheel onto the machine.

Only use machines with suitable blade guards.

Disconnect the machine from its power supply before mounting or removing a diamond tool.

Have your machine repaired solely by qualified personnel using original spare parts.

Application

Avoid unintentional starting of the machine. Make sure that the machine is switched off before connecting to power supply.

Secure the workpiece to prevent accidental slipping.

Support plates or large workpieces in order to reduce the risk of wheel pinching and kickback. Large workpieces tend to sag under their own weight.

Always wear personal safety equipment and eye protection. Wearing personal safety equipment, such as gloves, non-slip safety shoes, helmet and ear protection, always depending on nature and purpose of the tool, may reduce the risk of injury. Ensure adequate ventilation and protective measures that correspond to the material to be machined when working with cutting and rough grinding wheels.

Maintain a firm grip on the machine and keep balance at all times. Bring your body into a position where you can intercept kickback forces.

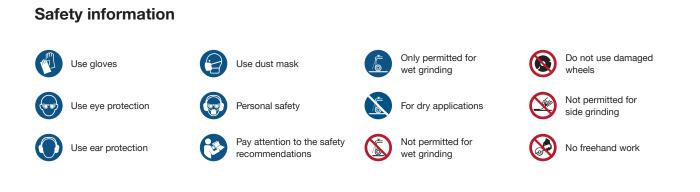

Do not position your head in line with the rotating wheel. Do not position your body in the area in which the machine will move in case of a kickback.

If the cutting wheel gets jamed or when interrupting a cut for any reason, turn off the machine and hold the machine motionless until the wheel comes to a complete stop. Never attempt to remove the wheel from the cut while the wheel is in motion otherwise kickback may occur. Do not restart the cutting operation in the workpiece. Let the wheel reach full speed before you re-enter the cut.

After turning off the machine, allow the wheel to come to rest naturally. Never use an "artificial" brake such as soil, wood pallets or shoes and never lay the machine down before the wheel has come to rest. The rotating wheel may grab the surface.

For rotating grinding tools with diamond or boron nitride, the maximum permissible peripheral speeds according to EN13236 must be observed. Information on the maximum permissible speeds can be found in the laser signature of your diamond saw blade, as well as on request.

For recommended speeds for wet drilling, see chapter wet drill bits page 23.

Trouble-shooting Wet core drill

1. Excessive wear of diamond segments

- Insufficient coolant supply. Adjust the water supply and/or check the water lines.
- The operating speed of the core drill is too low. Increase the RPM (see RPM recommendations).
- The engine power is too high. Match the motor power to the drilling diameter.
- The machine is vibrating. Fix the drill rig and/or check the general state of the machine (e.g. bearings and rollers).
- The selected core drill may not be suitable for the material being drilled, or the material is too abrasive. Use a harder specification (e.g. CDL - CDM).

2. Excessive wear of the steel tube

- The machine is vibrating. Fix the drill rig and/or check the general state of the machine (e.g. bearings and rollers).
- The core drill is warped / is not running true.
- The core drill is not fixed properly. Check if the core drill is aligned with the motor spindle.
- There are remains in the hole, which have not been removed by the coolant. Increase the coolant supply temporarily.
- You are drilling in loose material (e.g. gravel).

3. Broken segments

- In case of brazed segments, a short interruption of the cooling can lead to overheating and thus to a destruction of the soldered joint.
- The core drill has struck multiple times against reinforcements or fragments. Remove all loose steel and segment parts before introducing a new core drill.
- The core drill is cutting into loose reinforcement. Reduce the RPM when drilling reinforcements in order to avoid damage to the core drill.

4. Drill bit does not drill Segments are overloaded

Flat segment surface, possible deformation of the segments, high number of pull-outs (>50 %), drill chatters

- The operating speed is too low. Increase the RPM.
- The grinding pressure is too high. Reduce the pressure.
- The material may be too soft and abrasive for the used specification.
 Use a harder specification (e.g. CDL - CDM).

5. Drill bit does not drill

Segments are underchallenged

Smooth segment surface, polished diamonds (shining, no sharp edges)

- The diamond segments are smooth (polished).

- Re-sharpen the drill bit by drilling into soft, abrasive material or use a Tyrolit sharpening plate.
- The operating speed is too high. Reduce the RPM.
- The grinding pressure is too low. Increase the pressure.
- The engine power is too low.
 Match the motor power to the drilling diameter.
- Excessive coolant supply, only clear water is coming out of the drill hole (no slurry). Reduce the coolant supply and check the consistency (should be milky/cloudy).
- The material may be too hard for the used specification. Use a softer specification (e.g. CDL -CDM).

6. Core drill is jammed

- Debris is blocked between the core and the tube wall (steel, pieces of material). Remove the drill rig and, using a wrench, turn the core drill alternately in both directions until it can be removed. Take the debris out of the drill hole before introducing a new core drill.
- The drill rig was not fixed correctly and has moved during drilling. Drill rig and core drill are no longer aligned. Align and re-fix the drill rig.

Trouble-shooting Diamond saw blade

1. Excessive wear

- The saw blade is not suitable for the material being cut. Use a harder specification.
- Insufficient water supply. Adjust the water supply and/or check the water lines.
- The blade is pounding, which accelerates the wearing. The reasons could be poor bearings, a worn spindle shaft or the use of a too hard specification for the material being cut. Check the state of the machine or use a softer specification.
- The operating speed (RPM) is too low. Use the correct RPM for the diameter of the blade (see RPM recommendations).

2. Undercutting

Undercutting is a condition in which the steel center wears faster than the diamond segment, especially in the areas where the segment and core are joined. This is caused by highly abrasive material grinding against the blade during the sawing operation. Finally this can lead to segment loss.

- Be sure to have sufficient water supply. Only with sufficient water the abrasive grinding slurry will be transported out of the contact zone and will thus reduce the undercutting effect.
- Do not cut into the sub base of the pavement (lose gravel or sand).
 The loose material scrubs strongly on the body and tips it below the segments.

Caution! For safety reasons, do not use the saw blade any longer!

3. The blade does not cut

- The saw blade is too hard for the material being cut. Check if the specification is appropriate. A glazed blade can be sharpened by cutting into soft, abrasive material.
- The output power of the machine is insufficient to permit the blade to cut properly. Make sure that the specification is appropriate for the machine power and the material being cut. Repeatedly check the tension of the V-belt in order to guarantee an optimal transmission of power.
- The operating speed (RPM) is too high. Use the correct RPM. If the speed can't be changed, perform the cut in several passes.
- The blade is not mounted correctly. Ensure that the running direction of the saw is correct (direction of rotation arrow).

4. Overheating

Overheating may lead to several problems like loss of core tension, cracks in the steel core and segment loss (in case of brazed segments). Overheating can be identified by a discoloration (blue and/or black oxidation) of the blade or the segments.

- Make sure that wet-cutting saws have a sufficient water supply. Check the water lines and make sure flow is adequate on both sides of blade.
- An excessive cutting pressure leads to overheating of dry-cutting tools. Use several passes of 2 to 5 cm deep for cutting solid materials.

On a regular basis, release the pressure on the diamond blade and allow it to rotate freely for cooling in the air. Do not use excessive pressure – the weight of the machine is sufficient.

5. Loss of blade segment

- The machine was not held firmly or the material was not fixed, which caused the blade to twist or jam in the cut. Secure the material firmly while cutting and and maintain a firm grip on the machine.
- The blade is too hard for the material being cut which causes the blade to chatter. Use a softer specification.
- The blade has been undercut. Make sure that there is sufficient water supply and do not cut into the base layer of the pavement (gravel).
- In case of brazed segments, a short interruption of the cooling can lead to overheating and thus to a destruction of the soldered joint.
- The saw has not been mounted correctly and starts to chatter.

Caution! For safety reasons, do not use the saw blade any longer!

6. Cracks in the segment

- The saw blade is too hard for the material being cut; the saw blade starts to chatter during cutting. Use a softer specification.
- Insufficient cooling supply (overheating). Adjust the water supply and/or check the water lines.

7. Cracks in the steel core

- The saw blade is too hard for the material being cut. Use a softer specification.
- Excessive cutting pressure.
 Extreme strain on the blade can create material fatigue, which can then lead to a fracture in the steel core.
- The saw blade is chattering.
 Check the state of the machine (e.g. spindle and bearings) and the mounting of the saw blade.
- The cut is not straight which results in friction and heat.
 Properly align the machine and do not exert excessive side pressure on the handles as a method of steering. Check the alignment of the drive shaft.

Caution! For safety reasons, do not use the saw blade any longer!

8. Uneven segment wear

Make sure that wet-cutting saws have a sufficient water supply. Check the water lines and make sure flow is adequate on both sides of blade.

- The saw blade is irregularly worn due to defective bearings, a damaged blade bore or machine spindle. Exchange or repair the bearings and/or spindle. Ensure the engine runs smoothly and does not cause the blade to chatter on a regular cycle basis.
- The cut is not straight which results in friction and heat.
 Properly align the machine and do not exert excessive side pressure on the handles as a method of steering. Check the alignment of the drive shaft.

9. Loss of tension

- Blade has been overheated.
 Make sure that wet-cutting saws have sufficient water cooling.
- The saw blade is too hard for this application. The reason for the loss of tension is a high lateral friction.
- Check if the correct RPM has been chosen and if the proper flanges are being used.
- Ensure that the saw blade has been fixed correctly on the spindle. Make sure that drive pins are used for all machines.
- The cut is not straight which results in tension and heat. Properly align the machine and do not exert excessive side pressure on the handles as a method of steering. Check the alignment of the drive shaft.

In case of loss of tension send the saw blade back to the manufacturer for repair.

10. Damaged bore

- The flanges or the spindle are worn out. Check the flanges and spindle for wearing and replace the worn parts.
- The saw blade has not been mounted properly. Ensure that the blade is mounted on the proper diameter of spindle.Fix the wheel flanges properly (with a wrench, not by hand). Do not remove the drive pins, because they guarantee an optimal transmission of power.

Send the saw blade back to the manufacturer for repair.

Working together successfully

We regard our customers as partners. The success of our customers lies in the quality of our products, our knowledge in application technology and the provision of customer-specific on-site solutions. Close collaboration with our customers leads to remarkable strategic developments and ensures long-term success for both parties.

Promotion as a key factor

For choosing the right tool, the Tyrolit POS system offers complete support. Clear colour guidance systems, pictograms easy to understand and application advices: a flexible and easy to use presentation medium, optionally as Wall Display, Floor Display or Counter Display.

By request we also undertake the planing of your product assortment based on your customers' requirements and advise you on the optimum promotional positioning.
